
Filtering adds at most one implicit residual direction. Original support has q ≤ 4; the filtered trial has q ≤ 6.

The continuous extension filters only the largest numerator, giving working dimensions 11/29/≤30.

Rank one is not a one-dimensional search. Filtered largest input uses existing G/K/J; the earlier reduced largest input uses G/K.

No displayed count is an MPS bond dimension. The 193-state complete band is not required by the rank-one numerator proof.
