
18 physical inputs, β=49/4; 2428 batches. Exact coarse/refined scalar mapping and prior D26 MPS72 anchor verified.

The .0214 lower bound is ≈44.6585× and ≈5.6005× the original bounds on overlapping scopes; not a gap estimate.

Original first initialization 60 and second initialization 36. No minimum-size or below 36 claim.
