

Every integer cell M ≥ 2; physical sites L = 2M. Unique finite-volume ground state; unit designated first bond.

Physical Gibbs κ32 ≤ .136, κ64 ≤ .157; D26 / one trial vector. Cell 16 seed, physical 64 anchor, β = 49/4.

39 exact windows and 14 finite lengths per row. Physical 24 uses parity/MPS48. No optimal radius or odd-physical-size claim.
